LEVEL 1 · 2 HOURS · APEX PRECISION MANUFACTURING

Build a trusted manufacturing Genie agent in two hours.

A standalone lab for analysts, BI leads, and first-time Genie authors. Apex is fictional. The governance pattern is real.

Governed data | Curated instructions | Exact benchmarks

2h	7	10/10	~5/min
Lab duration	Table groups	Exact benchmarks	Conversation API

WHAT YOU LEAVE WITH

You leave with one agent that passes 10 exact benchmarks.

1	2	3	4	5	6	7
Prereq check	Seed seven tables	Create the agent in the UI	Curate instructions	Run 10 benchmarks	Blank vs curated	Shift-start briefing

Clock. 0–10 prereq · 10–25 data · 25–45 create · 45–65 instructions · 65–95 benchmarks · 95–110 tests · 110–120 briefing.

GOVERNED MODEL

Apex is fictional, but the governance pattern is real.

Plants

Six sites. No live plant feed.

Lines

Equipment grain for OEE later.

Shifts

Shift-start briefing unit.

Work orders

Production identity.

Quality

FPY and scrap facts.

Downtime

Availability inputs.

Parts

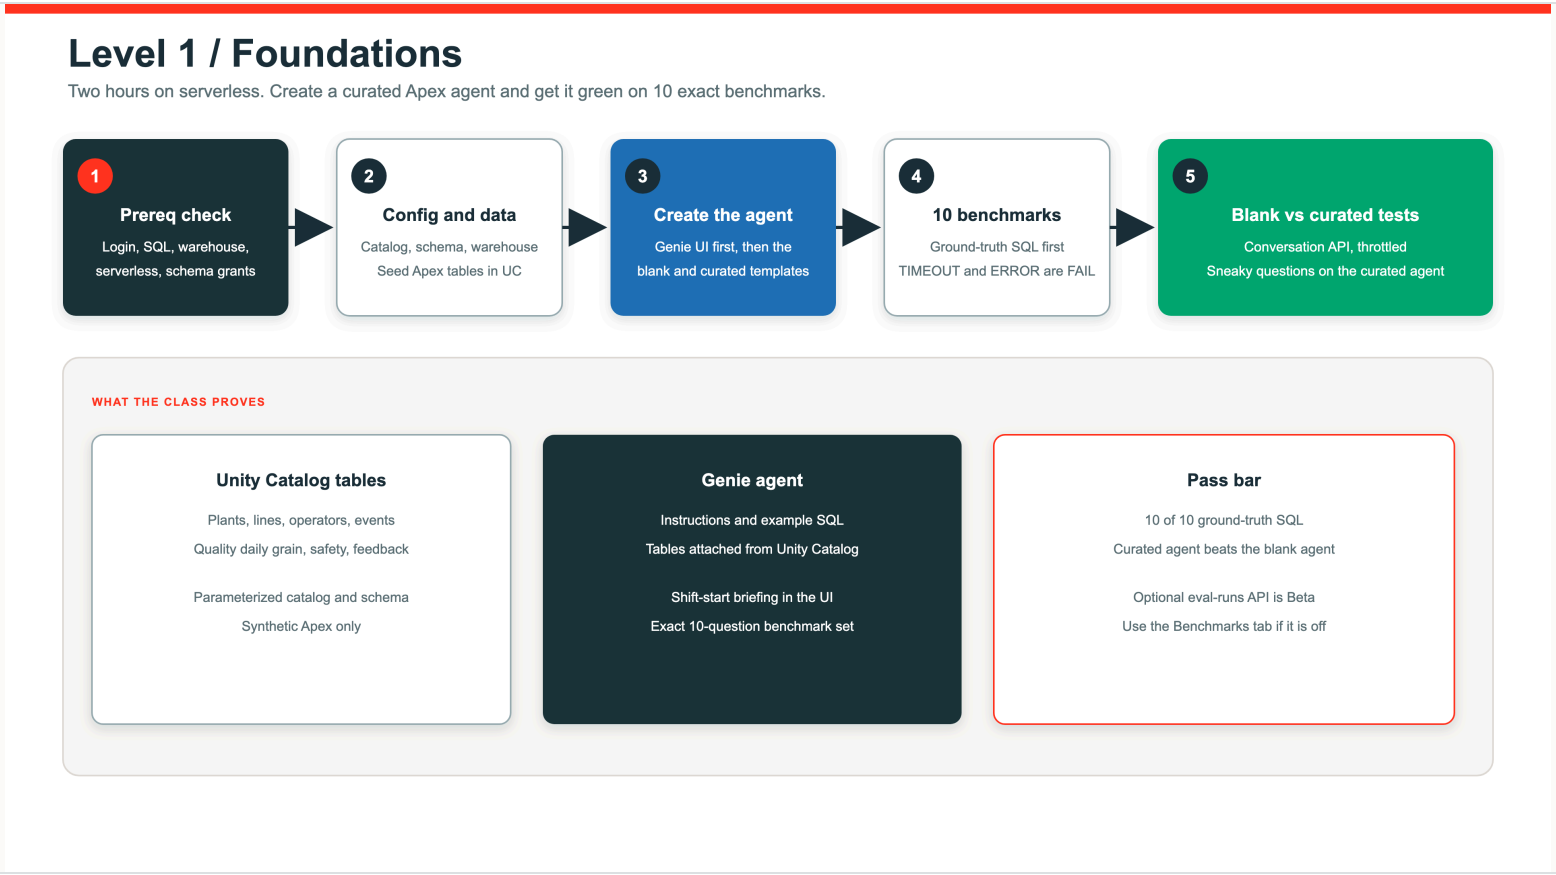

Component catalog.

Unity Catalog

You own catalog, schema, and warehouse widgets. Do not commit them.

CREATE THEN CURATE

Create the agent in the UI, then curate it with reusable templates.

INSTRUCTION CRAFT

One example SQL beats ten paragraphs of vague instructions.

Terminology

Name plants, lines, FPY, scrap, and shifts the way the tables are named. Do not invent synonyms.

Joins and grain

State the grain in one sentence. Wrong grain is a fail even if the number looks close.

Example SQL

Paste a working query for the hard join. Genie copies patterns better than prose.

Facilitators: follow `level-1-foundations/FACILITATOR_GUIDE.md`.

BENCHMARKS

Benchmarks are exact. TIMEOUT, NO_ANSWER, and ERROR fail.

1

Ground-truth SQL

Run the certified query first.

2

Ask the agent

Same question, natural language.

3

Compare

Exact match. Close is still FAIL.

4

Fix and rerun

Patch instructions, not the question.

10	PASS	FAIL	Beta
Questions	Exact only	TIMEOUT / NO_ANSWER / ERROR	eval-runs API; else Benchmarks tab

PROVE CURATION

Blank versus curated proves that curation changes behavior.

Blank agent

Same tables. No instructions. Expect wrong grain, skipped filters, and polite guesses.

Curated agent

Terminology, joins, and example SQL. Same 10 questions should now pass.

Ambiguous

“How are we doing today?” must ask for plant or shift, not invent a KPI.

Out of scope

HR or finance questions stay unanswered. No hallucinated tables.

Unit trap

Percent vs ratio vs count. Units in the instruction save the answer.

CLOSE THE LAB

Finish with a shift-start briefing and share the agent.

1

Which plant missed FPY last shift?

2

Where did downtime concentrate?

3

Which line should the supervisor walk first?

4

What is still out of scope for this agent?

You built one governed Apex agent and proved it on 10 exact questions. Share that agent with the room. This lab ends here.
